

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

NOVEMBER 10, 1904.

On the 7th instant a suspicious case of fever was found in a hotel in this city. The patient, an American woman, had come from Panama on the 3d and was taken sick during the night of the 5th; consequently it is reasonable to infer that the disease was contracted in Panama. As soon as possible she was transferred to the screened wards of the hospital of the Panama Railroad Company. After careful examination the case was pronounced yellow fever. The patient was seen by Surgeon H. R. Carter, who stated that he was reasonably sure that it was a case of yellow fever. The further development of the case has strengthened the diagnosis made. The room in the hotel was properly disinfected and all necessary precautions taken. No further cases have been reported here or in Panama.

## PERU.

*Report from Callao—Plague in Peru and Chile—Typhus fever.*

Assistant Surgeon Lloyd reports, October 24, as follows:

Official reports for the first 15 days of October give 5 cases of plague as having occurred in the Province of Lima. Three cases of plague and 1 (suspect) case of typhus fever occurred in Callao during the same period. The case of typhus fever was probably imported from Cerro de Pasco (in the interior), where I am told this disease is not uncommon.

Plague continues in Eten and Arica (Chile), and is again officially reported in Iquique.

## PHILIPPINE ISLANDS.

*Reports from Manila—Quarantinable diseases—Inspection and fumigation of vessels—Decrease in plague at oriental ports.*

Chief Quarantine Officer Heiser reports, October 14, as follows:

During the week ended September 24, 1904, 2 cases of smallpox and 2 deaths occurred in the city of Manila.

On September 23, 1904, the British steamer *Atholl* cleared for New York. The cabins, storerooms, and forecastles were fumigated with sulphur. Crew were inspected on board prior to sailing.

During the week ended October 1, 1904, one case of smallpox was reported in the city of Manila. After the case was placed under observation in the smallpox hospital, the disease was found to be yaws, not smallpox.

On September 30, 1904, the steamship *Tremont* cleared for Tacoma via Chinese and Japanese ports. One hundred and forty-five crew, 17 cabin, and 48 steerage passengers were inspected just prior to sailing. All suspicious ship's cargo and personal effects were disinfected.

For the week ended October 8, 1904, one death from smallpox was the only quarantinable disease reported in the city of Manila.

*Plague.*

The number of plague cases in the near-by oriental ports is diminishing very rapidly. The last case of plague reported in the Philippine Islands occurred in Manila on September 8, 1904. If this favorable condition of affairs continues it is hoped that many of the restrictions which have been imposed upon vessels bound for the United States

almost continuously since the American occupation of the islands may be removed.

In view of the favorable report received from the United States consular surgeon at Amoy, it has been recommended that he permit the embarkation of steerage passengers for Manila after October 15, 1904, without first undergoing a seven days' quarantine detention, which has been in force since the outbreak of the last epidemic of plague in Amoy. Such vessels, however, in view of the poor facilities for disinfection at Amoy, are still to call at Mariveles as in the past for disinfection prior to coming to Manila.

On October 5, 1904, the British steamer *Vulcan* cleared for New York via Marseille. This vessel was fumigated throughout—the holds, forecastles, engine rooms, cabins, etc., all being treated with sulphur dioxid gas. Crew was inspected on board at the hour of sailing.

On October 8, 1904, the British steamer *Sagami* cleared for New York. Forecastles and storerooms were fumigated with sulphur. Crew was inspected on board prior to sailing.

#### PORTO RICO.

##### *Arrival of immigrants at San Juan.*

Report of arrivals of alien steerage passengers at San Juan during the week ended November 12, 1904. (October arrivals.)

#### AGUADILLA.

Date of arrival.	Vessel.	Where from.	Number of aliens.
Oct. 5	Ss. Graecia.....	St. Thomas, Danish West Indies .....	3

BENSON H. SISSON, *Acting Commissioner.*

#### RUSSIA.

##### *Report from Batoum—Cholera in Baku.*

Acting Vice-Consul Stuart reports, October 24, as follows:

With further reference to my dispatch of the 10th ultimo, according to information which I have received from Baku, it would appear that cholera broke out there toward the end of last month, and that up to the 10th of the present month 249 cases and 141 deaths had occurred. Since the 10th instant the disease appears to have been gradually diminishing, and I am informed that about 6 cases per diem have been reported. On the 21st instant 5 cases were reported, and 2 deaths occurred on that day. From the 21st to the 22d instant 1 patient was admitted to the cholera hospital. On the 22d instant there were 25 patients in hospital (15 males and 10 females), but there were no deaths that day.

#### WEST INDIES.

*Report from Barbados—Inspection and fumigation of vessels—Treatment of barkentine Ensenada on account of smallpox—Quarantine against certain ports—Health of the island.*

Assistant Surgeon Ward reports, November 2, as follows:

During the week ended October 29, 1904, I inspected and issued bills of health to 5 steamships and 8 sailing vessels, with 326 crew, 11
